DirtyCoin Whitepaper v1.0

For the pleasure you deserve

TABLE OF CONTENTS

INTRODUCTION

In an atmosphere of increasing belief in quick profits, currencies that rely on gimmicks for their success are then abandoned. DirtyCoin will be the first crypto currency used for the Adult Industry, the Escort Industry and for means of pleasure. It is the best industry specific cryptocurrency targeting the Adult Entertainment Industry and the Escort Industry. The developers chose the name DirtyCoin because it best fits our goal to be the currency of private, secure and fast transactions for all things related to it. For anyone who wants to use the coin and take advantage of its usability, it will be possible. The coin will be listed on different ERC-20 exchanges. For those who want to trade and hold the coin. We will post a list of all our partners who accept our coin as a payment option. And our partners will also have it as a payment option to buy their services. We believe in DirtyCoin's potential and are willing not only to build the infrastructure it requires for widespread adoption in the industry, but take the time to ensure product quality and security.

VISION

Our vision is to provide users with a safe, secure and anonymous way to buy all of our services and resources, this includes pornographic content, pleasure and escorts. We believe this can be achieved through the blockchain. With this ICO crowdfunding we believe this perfect world of adult industry can be achieved as soon as mid 2018. We want to achieve maximum comfort and safety for customers while using our services. Our coin represents the future of the Adult Industry and the Escort Industry. And we guarantee the best pleasure and fun you'll have in your life.

Statistics show that the Adult entertainment Industry has an annual global turnover of 100 billion dollars, with around 30 000 internet users viewing adult material every second, which are essentially digital goods. Another estimated 50 billion dollars in the escort business. Due to slow and public transactions with traditional payment systems the industry has struggled to bloom and thrive. With this futuristic business model the industry can grow and not worry about the set-backs in security and private information, all of this has been so successful in other online entertainment industries such as gaming and music and in some cases credited with reviving them. The crypto transactional business model is also more attractive to the consumer as they are no longer fettered by time constraints imposed by the subscription business model, and can pay for only the content they want, when they want. The micro transactional business model can be adopted in addition to the existing subscription model. As such it presents to the provider a low risk way of accepting additional payments, and increasing their customer base.

SECURITY

The Adult Industry has struggled with traditional payment methods. The use of credit cards has left the industry open to "friendly fraud" whereby customers charge back payments and "unfriendly fraud" where stolen credit card details are used as payment to check their validity. With banks charging fees to the content provider when this occurs, the Adult Industry is essentially high risk and has had difficulty with banks refusing to help them in their commerce. Providers of adult material have unsuccessfully searched for alternative payment systems. We are using the best features of the blockchain. Anonymous payments. The first major problem is that every transaction is publicly logged. Anyone can see the flow of Bitcoins from address to address. Alone, this information can't identify anyone because the addresses are just random numbers. However, if any of the addresses in a transactions can be tied to an actual identity, it might be possible to work from that point and guess who may own all of the other addresses. DirtyCoin(DTC) uses a technology where all the users data is decentralized and is completely anonymous. That's why DTC will gain wide spread adoption for digital goods in the Adult Industry aswell as the Escort Industry because it provides a safe, private and fast payment option.

Another security feature that we take with the upmost responsibility is keeping our customers location a secret and tailored to everyones needs. That's why we suggest to everyone to have their meetups with our women outside their home town. The meet up points would be executed to each individual clients wishes and desires. This can all be achieved through the blockchain for maximum security.

PAYMENT METHODS

The most important thing to us is to make the client happy. DirtyCoin will gain wide spread adoption for digital goods in the adult industry and Escort Industry because DTC provides a safe, private payment method. The adult industry has struggled with traditional payment methods. The use of credit cards has left the industry open to "friendly fraud" whereby customers charge back payments and "unfriendly fraud" whereby stolen credit card details are used as payment to check their validity. With banks charging fees to the content provider when this occurs, the Adult Industry is essentially high risk and has had difficulty with banks refusing to help them in their commerce. Unlike Paypal which charges 2.9% + $0.30 per paid request to receive money from customers. DirtyCoin has substantualy lower fees with only 0.1 DTC for each transaction. With this we assure that our customers get the most bang for their buck. DirtyCoin is aiming to be a replacement for the current payment processing system. With this you can avoid the unfair fees and discrimination faced when dealing with tradition models and institutions.

ICO DETAILS

Technical Specifications:

-Formal Name: DirtyCoin

-Symbol: DTC

-Decimals: 18

-Initial Supply: 100,000,000 DTC

DTC coin ICO price: 0.00015 ETH per DTC coin. For easier understanding, this equates to 0.15 ETH per 1000 DTC coins. ICO will end either when 50,000,000 DTC coins are distributed or when its is the 25th of December 00:00 whichever comes first. We will deploy a smart contract that has a hard cap of 100,000,000 DTC tokens and post the address on our official website, http://dirty-coin.com.
